

## InfinityHR Acumatica Integration

InfinityHR has created an integration with Acumatica (version 5.2), which allows a single point of entry for employee data to be updated in real-time. Our seamless integration is easy to use and makes it convenient to manage employee data without the need for duplicate data entry.

## The integration includes the following features:

- System utilities to load company level fields from Acumatica into the InfinityHR application. These fields allow for a quick and accurate means of implementing your clients on the InfinityHR application.
- System utilities to load employee level fields from Acumatica in to the InfinityHR application
- Once the integration is established between InfinityHR and Acumatica, data is pushed back in real time to the Acumatica platform and update new hires, changes in demographics and terminations
